The Sollay Kenyan Foundation and Leading Organizations Call for an Essential Workers Bill of Rights

BALTIMORE, MD (May 06, 2020) – The [Sollay Kenyan Foundation](#), [Katani Hospital](#), and the [Dr. Baker family of companies](#) join the [High Alert Institute](#) and the [Renaissance Worldwide Solutions Family of Companies](#) in calling for an Essential Workers Bill of Rights.

During the April 8, 2020 White House Corona Virus Briefing, CDC Director Robert Redfield outlined the minimum measures that every business should take to minimize the risk of spreading airborne particles and pathogens in workplaces, office, shops and other businesses. "What the CDC has done is that we've really looked at the essential workforce, and how to maintain that workforce, particularly at this time as we begin to get ready to reopen, and have confidence in bringing our workforces back to work." The CDC director, Dr. Redfield continued, " We'd like them (employers) to increase air exchange in the buildings and increase the frequency of how they clean common surfaces and really began to get these workers back into the critical workforce so that we won't have a worker shortage in these critical industries. So that's the new guidelines the CDC will be posting today." The CDC Interim Guidance to Businesses and Employers recommends all businesses "increase the amount of air exchanges in the common work areas and other rooms employees share."

"The COVID-19 pandemic has brought to light the dangers of stale indoor air, poor air quality and the environmental dangers that disproportionately impact the essential workers across the nation," stated Allison Sakara, Executive Director of the High Alert Institute. "These Essential Workers facilitate the emergency support functions necessary for our survival during disaster and pandemics as well as during the recovery after the stay-at-home orders and quarantines end. It is imperative that every workplace and home follow the recommendations of the CDC for frequent fresh air exchanges with outside air. We must provide for the care and safety of our citizens and ensure that all Essential Workers, First Responders, Healthcare Workers and their families be protected and supported at work and at home."

Additionally, the World Health Organization (WHO) has determined that environmental factors such as poor indoor air quality, poor water quality and noise pollution are detrimental to the overall health of the world's population. "At Natural Air E-Controls, LLC, we are proud to be the only company with patented technology to safely increase air exchanges in low-rise business buildings and homes using a sensor-based ventilation controller. Our system can help protect essential workers from COVID-19 infection by optimizing indoor air quality while saving on the overall costs of operating an HVAC system," says Mona Kelley, Managing Member of Natural Air E-Controls, LLC. "Supporting an Essential Workers Bill of Rights Position Statement is a natural extension of our daily work."
